

Manugraph leaps ahead with distributorship in packaging machinery

Manugraph world leaders in 4-page printing machines now enter a new arena of packaging machinery with a tie up with Masterwork Machinery Co Ltd; China who are Number one manufacturers of high precision, high speed automatic die-cutting machine, high precision automatic platen foil stamping with hologram system, and the high speed automatic folding and gluing machine.

MKM is in the packaging machinery business since the last 10 years. The Company invests a substantial amount of funds every year into new product development, R & D, international market research of new technology and production methods etc. With a focus on continuous innovation in technology the entire process of Die cutting , Foil stamping & Embossing which were earlier separate machineries have been integrated in a single machine completing all the three processes; at one go which is a leap forward in technology. It should be noted that this is the first machine in the world in this category.

MKM has approximately over 1350 machines worldwide. Total installations in 2010 were around 280. The export market includes US, Britain, Russia, Ukraine, Spain, Australia, Peru, Egypt, and Japan & South Korea.

Asserting on the new venture Mr. Pradeep Shah says "As a global leader in printing technology, we continue to grow and enter new markets. This time it has been a new emerging sector, packaging machinery. We are currently aiming at providing cost effective, productive and reliable solutions in the packaging sector. Manugraph's strength and success has always been excellent after sales service. I can only tell our Customers that Manugraph is committed to serve them for years to come, not just by supplying them quality printing machines but packaging machines as well with top-class after sales service. Every client of ours enjoys personalized attention whatever product he orders"
